Emerson Group**

the cornerstone of excellence

EQUETURF POLY PRO

HIGH QUALITY EQUESTRIAN FIBRE

Certified, stamped & traceable

EQUETURF POLY PRO FIBRE

Norman Emerson Group have been appointed stockists of 'EqueTurf Poly Pro' to the local equestrian market after considerable research and collaboration with equestrian fibre manufacturers across Europe.

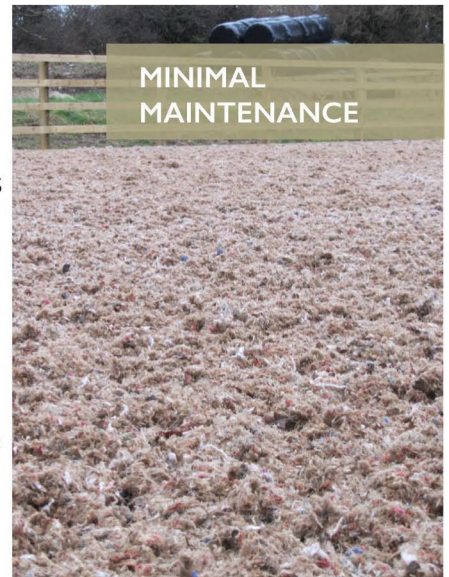

Benefits are: better moisture retention and rebound. The wider range of fibre size will greatly improve the finished surface when used with high quality, sub angular silica sand supplied directly by Norman Emerson Group.

EqueTurf Poly Pro is a special mix of high quality polypropylene, polyester and nylon fibres. This robust mix is a fully traceable, post-industrial product that is free from contamination, glue and mould.

With the ever-increasing demand for artificial equestrian surfaces, there are many contractors who will offer recycled carpet fibre. Unfortunately, there is no regulation or guidelines on these materials offered for sale, with many performance and safety considerations being ignored. Reclaimed carpets are bad for the health of both you, and your horse!

As an equestrian sand supplier with a love for the sport, we are constantly researching the best products to improve performance, consistency and safety of surfaces. Whether you plan to install a gallop or arena, the EqueTurf range of products has the right fibre for all disciplines at all levels.

Our compact, wrapped Poly Pro bales weigh approx 300kg and cover 75m²~
